According to our LPI (LP Information) latest study, the global High Efficiency Film Coating Machine market size was valued at US\$ million in 2022. With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the High Efficiency Film Coating Machine is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global High Efficiency Film Coating Machine market. With recovery from influence of COVID-19 and the Russia-Ukraine War, High Efficiency Film Coating Machine are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of High Efficiency Film Coating Machine. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the High Efficiency Film Coating Machine market.

The high-efficiency film coating machine is a device for coating the surface of Chinese and Western medicine tablet cores with sugar and film. It is a new type of equipment that integrates strong electricity, weak electricity, hydraulic pressure, and pneumatics and transforms the original ordinary sugar coating machine. It is mainly composed of main engine (former sugar coating machine), controllable room temperature hot air system, spray system for automatic liquid supply and air supply, etc. The main motor is adjustable in frequency and speed. It sprays the coating auxiliary materials on the surface of the tablet with a high-atomization spray gun by means of automatic control by

electrical appliances. At the same time, the tablet moves in a continuous and complicated trajectory in the coating pot to make the coating liquid uniform. Wrapped on the core of the tablet, there is a controllable room temperature hot air in the pot to dry the tablet at the same time, so that the surface of the tablet quickly forms a firm, dense, complete and smooth surface film. Accessories: governor, spray gun, liquid cup, coating pan, blower.

Today, the problem of aging societies in various countries is gradually intensifying. The increasing use of oral preparations among the aging population, as well as the increasing use of orphan drugs and biopharmaceuticals, are driving market expansion. Shifting focus in pharmaceutical manufacturing to emerging markets and focus on nutraceuticals offer huge growth opportunities to market players. There is a huge demand for film coating machines in the pharmaceutical industry due to their short processing times, relatively thin coatings obtained compared to other coating types, high resistance to mechanical action and increased number of tablets. With its functional characteristics and other advantages, the film coating machine market will still have great growth potential in the future.
