High Energy Density NCA (Nickel Cobalt Aluminum) cathode material is a high-nickel ternary material with ultra-high specific capacity and working voltage, widely used in high-performance lithium-ion batteries. It significantly improves battery energy density, cruising range and discharge performance, mainly for high-end electric vehicles and energy storage systems.

The industrial chain covers upstream raw materials including nickel, cobalt, aluminum compounds, precursors and electrolytes. Midstream includes sintering, granulation and modification of NCA cathode materials. Downstream is applied in power batteries, electric vehicles, energy storage stations and consumer electronics, supported by battery processing, testing and recycling systems.

The high energy density NCA market is driven by the rapid development of high-end electric vehicles and long-range battery demand. High-nickel NCA materials effectively improve energy density and cruising range, meeting the upgrading needs of the power
