Abstracts

The global High Energy Laser Weapons market size is predicted to grow from US\$ 6973 million in 2025 to US\$ 12130 million in 2032; it is expected to grow at a CAGR of 8.4% from 2026 to 2032.

Laser technology is widely used in the military field. According to the laser output power, it can be divided into low-energy laser weapons and high-energy laser weapons. Low-energy laser weapons use weak laser lasers as the core, such as laser ranging and laser guidance, etc. are low-energy laser weapons. High-energy laser weapons use powerful lasers as the core, and use lasers as energy to damage or disable targets. High-energy laser weapons use the high energy density characteristics of lasers to ablate the irradiated target, thereby achieving damage or defunctionalization of the irradiated target. At present, it is generally believed that the average output power ≥ 20 kilowatts is called a high-energy laser weapon.

In order to combat aerial threats such as missiles and drones, the demand for laser weapon systems by navies around the world is growing rapidly.
