## Abstracts

The global High-expansion Foam Generator market size is predicted to grow from US\$ 350 million in 2025 to US\$ 562 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

In 2025, global sales of high-expansion foam generators reached 42,000 units, with an average selling price of US\$8,500. The upstream raw materials for high-expansion foam generators mainly include carbon steel (approximately 35%), stainless steel (30%), motor and fan components (20%), and foaming nets and seals (15%), with an annual consumption of approximately 58,000 tons. Downstream suppliers are primarily fire protection engineering contractors (40% of procurement), petrochemical and energy companies (25%), large logistics and warehousing operators (20%), and government emergency departments (15%). They are mainly used in total flooding fire suppression systems for large warehouses, airport hangars, tunnels, and industrial plants. Currently, the industry's average gross profit margin is between 38% and 50%. Future development focuses on intelligent integration (such as IoT remote monitoring and AI fire assessment), the development of explosion-proof and corrosion-resistant special models, and infrastructure safety needs in emerging markets (such as Southeast Asia and the Middle East). The combination of modular rapid deployment systems and environmentally friendly foam agents will become a core business opportunity.
