A High Frequency Comb Generator is a type of signal generator that produces signals at harmonic multiples of an input signal. On a spectrum analyzer, the output appears as comb-like teeth across the frequency spectrum. There are RF and microwave comb generators that produce signals in the radio and microwave frequency ranges, as well as optical comb generators that can operate in the terahertz frequency range. Comb generators have various applications in RF and microwave industries, such as synchronous signal sources, broadband frequency synthesizers, emissions testing equipment, and high-frequency signal sources that synchronize with phase-locked loop oscillators. They are commonly used in commercial and industrial applications.
