High Frequency Cutting Knife is a medical or endoscopic electrosurgical cutting instrument that uses high-frequency electrical energy to cut, dissect, or coagulate soft tissue with controlled thermal effect. It is widely used in minimally invasive surgery, endoscopy, gastrointestinal procedures, urology, gynecology, and general surgical treatment requiring precise cutting and hemostasis.

The industrial chain of High Frequency Cutting Knife covers upstream components such as stainless steel tubes, electrodes, insulation materials, handles, wires, connectors, ceramic parts, packaging materials, and sterilization consumables. The midstream consists of precision machining, electrode assembly, insulation processing, functional testing, sterilization, quality inspection, and packaging. Downstream applications mainly include hospitals, endoscopy centers, surgical departments, ambulatory surgery centers, and medical consumable distributors.

Minimally invasive surgery development and clinical precision operation requirements boost the application of high frequency cutting knives. It realizes rapid cutting and hemostasis with small trauma, effectively shortening operation time. Safety control optimization and diversified specifications meet the needs of different surgical departments.
