High-frequency microwave printed circuit board is a special printed circuit board specially used for high-frequency microwave communication. Its main feature is that it works in the high-frequency microwave band (greater than 2GHz) and can meet the low-loss and low-delay transmission requirements of high-frequency signals. This type of printed circuit board is usually processed and manufactured on a microwave substrate copper-clad plate. Commonly used substrates include polytetrafluoroethylene (PTFE), etc. These materials have a low dielectric constant and dielectric loss tangent, and are suitable for high-frequency signal transmission.

United States market for High-frequency Microwave Printed Circuit Board is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
