## Abstracts

The global High Frequency Sonar market size is predicted to grow from US\$ 108 million in 2025 to US\$ 156 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

High-frequency sonar is an underwater acoustic sensing system that operates at relatively high sound frequencies—typically above 100 kHz and often in the 300 kHz to MHz range—to achieve very high spatial resolution for short-range detection, imaging, and measurement of underwater objects, seabed features, and structures. From an industry chain perspective, the upstream segment includes core technologies and components such as piezoelectric or composite acoustic transducers, power amplifiers, signal processing chips (DSP/FPGA), high-frequency electronics, housings and pressure-resistant materials, cables, and software algorithms for beamforming and image reconstruction, supplied by acoustic material vendors, electronic component manufacturers, and marine-grade materials suppliers. The midstream segment consists of sonar system manufacturers and integrators, who design and assemble complete high-frequency sonar products—such as imaging sonar, side-scan sonar, multibeam sonar, forward-looking sonar, and inspection sonar—and integrate hardware, firmware, and visualization software into systems suitable for vessel-mounted, ROV/AUV-mounted, towed, or fixed installations. The downstream segment includes end users and application markets, such as hydrographic survey companies, offshore energy and marine engineering contractors, port and harbor authorities, defense and security organizations, scientific research institutions, and operators of underwater robots, where high-frequency sonar is widely used for seabed mapping, infrastructure inspection, navigation and obstacle avoidance, search and rescue, and underwater security. Overall, the high-frequency sonar market is driven by growing demand for high-resolution underwater imaging, offshore infrastructure inspection, autonomous

underwater systems, and maritime safety, with ongoing advances in digital signal processing and miniaturization further expanding its application scope.

In 2025, global High-frequency sonar sales volume reached approximately 2175 units, with an average global market price of around 50.8 k US\$ per unit.

United States market for High Frequency Sonar is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for High Frequency Sonar is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
