The global High Heat Melamine Foam market size is predicted to grow from US\$ 141 million in 2025 to US\$ 230 million in 2031; it is expected to grow at a CAGR of 8.5% from 2025 to 2031.

High Heat Melamine Foam is a foam-like material consisting of a formaldehyde-melamine-sodium bisulfite copolymer, widely used in industrial, construction, transportation, aerospace etc.

Melamine foam belongs to thermosetting plastic foam, and the traditional polyethylene, polystyrene and low crosslinking degree of polyurethane foam (working temperature is 80 °C, and more than 80 °C when the distortion and decomposition), compared with high thermal stability and aging resistance, can be in for a long time - between 180 °C to 200 °C temperature range of the stable work, can bear the high temperature of 240 °C in the short term. Therefore, melamine foam can replace polyolefin in broad areas, such as polystyrene, polyurethane foam plastics.

High Heat Melamine foam is flame retardant, heating and insulating, and heat resistant. Melamine foam is often mixed with other materials to create various products. It has been used for over twenty years as insulation for pipes and ductwork, the low smoke and flame properties of melamine foam prevent it from being a fire hazard.

Global High Heat Melamine Foam key players include BASF SE, PUYANG GREEN FOAM, Clark Foam, LINYI YINGKE CHEMISTRY, BEIJING GUOJIAN ANKE, etc. Global top five manufacturers hold a share over 45%.

China is the largest market, with a share about 75%, followed by Europe, and USA, both have a share over 15 percent.

In terms of product, Semi-Rigid Melamine Foam is the largest segment, with a share over 40%. And in terms of application, the largest application is Construction, followed by Transportation, Industrial, etc.
