High impedance headphones are those with a relatively high impedance value (usually 300 ohms and above). These headphones are designed mainly for use in professional recording studios, music production, and monitoring environments because they can maintain good sound quality at a lower driving voltage while reducing the interaction with the headphone amplifier. High impedance headphones usually need to be driven with appropriate amplification equipment to give full play to their performance and ensure the purity and detail of the audio signal. These headphones are widely used in recording studios, broadcast studios, and professional audio production.
