The global High-intensity Focused Ultrasound System market size is predicted to grow from US\$ 493 million in 2025 to US\$ 1845 million in 2031; it is expected to grow at a CAGR of 24.6% from 2025 to 2031.

High intensity focused ultrasound (HIFU) is an early stage medical technology that is in various stages of development worldwide to treat a range of disorders.

The mechanism is similar to using a magnifying glass to focus sunlight. Focused ultrasound uses an acoustic lens to concentrate multiple intersecting beams of ultrasound on a target. Each individual beam passes through tissue with little effect but at the focal point where the beams converge, the energy can have useful thermal or mechanical effects

The major players in global High-intensity Focused Ultrasound System market include Chongqing Haifu Medical Technology, Philips Healthcare, etc. The top 2 players occupy about 30% shares of the global market. Asia is the main market, and occupies about 50% of the global market. MR-Guided is the main type, with a share about 70%. HIFU for Cosmetic is the main application, which holds a share about 95%.
