## Abstracts

The global High K Paste PVC market size is predicted to grow from US\$ 369 million in 2025 to US\$ 426 million in 2032; it is expected to grow at a CAGR of 2.4% from 2026 to 2032.

Global sales of High K Paste PVC was about 322 k tons in 2025 with average price of 1170 USD/ton. Compared with low K value PVC paste, the high K value faces a certain technology barrier.

High K Paste PVC refers to a paste-grade (dispersion/emulsion) PVC resin intended for plastisol processing, with a high K-value (K-number)  $\geq 75$ , indicating a higher average molecular weight / degree of polymerization compared with standard or low-K paste PVC grades. In practice, high-K paste PVC is selected when end products require higher mechanical strength, better heat resistance/creep performance, and improved plasticizer retention (lower migration), typically at the cost of higher plastisol viscosity and a narrower processing window unless formulations are adjusted (e.g., plasticizer type/level, diluents, rheology modifiers).

United States market for High K Paste PVC is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
