The global High K Value Thermal Gap Pad market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

High K value thermal pads have a thermal conductivity of up to 20w/m.k

High thermal conductivity (K value) gap pads are materials used in electronic and thermal management applications to improve heat dissipation and thermal performance. These materials are particularly important for applications like electronic devices, automotive electronics, LED lighting, and more. The electronics industry has experienced a growing demand for high K value thermal gap pads due to the increasing heat generation in devices like smartphones, laptops, and servers. These materials help dissipate heat and prevent overheating, which can affect device performance. With the proliferation of electronics in vehicles, high K value thermal gap pads have become essential for thermal management in automotive applications. They are used in electric vehicles (EVs) to dissipate heat from batteries, power electronics, and other components.
