The global High Maltose Syrup market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

High-maltose syrup is a food additive used as a sweetener and preservative. The majority sugar is maltose.

Growing demand for natural and healthier ingredients in the food industry has led to increased demand for high maltose syrups, especially those produced from corn or other natural sources. Rising consumer demand for natural and gluten-free food amid rising health awareness is underpinning the growth of the segment. In recent years, due to the negative reputation of high fructose corn syrup, which has been reported to have adverse health effects, the demand for high maltose corn syrup as a food additive has been increasing. Maltose is safer than fructose and galactose. Moreover, the consistent properties of maltose are likely to drive the product demand in the pharmaceutical industry as an alternative to chemically produced sugars. Other factors such as growing demand for ready-to-drink beverages, confectionery, and baked goods, rising disposable income and rising living standards, rising research and development activities, and new product launches are expected to further drive industry growth over the forecast period.
