The soft starter is a novel motor control device that integrates motor soft starting, soft parking, light load energy saving and multiple protection functions. It mainly consists of three-phase parallel thyristor and its electronics connected in series between the power supply and the controlled motor. The control loop consists of using different methods to control the conduction angle of three opposite parallel thyristors so that the input voltage of the controlled motor changes according to different requirements, so that different functions can be achieved. Soft starters can be classified differently according to different standards. For example, they can be divided into low, medium and high-voltage soft starters according to their applicable voltage range; the research scope of this report is low-voltage and high-voltage soft starters.

The global High and Low Voltage Motor Soft Starter market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
