## Abstracts

The global High Nickel-chromium Indefinite Chilled Cast Iron Roll market size is predicted to grow from US\$ 79.63 million in 2025 to US\$ 109 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

High Nickel-Chromium Indefinite Chilled Cast Iron Rolls represent a high-alloy grade within the broader Indefinite Chilled Cast Iron Roll (ICDP) category. Developed from conventional ICDP materials by increasing nickel and chromium content and optimizing microstructural control, this grade offers enhanced performance. It typically features a composite structure with a wear-resistant chilled shell and a tougher core, providing improved wear resistance, spalling resistance, and thermal-fatigue performance under demanding rolling conditions. These rolls are widely used in hot strip mills, cold rolling mills, and selected high-load section rolling applications. Upstream inputs include high-purity pig iron or quality scrap steel, nickel and chromium alloying elements, inoculants, and related metallurgical additives, all requiring strict composition stability and cleanliness control. Downstream customers are primarily steel producers and rolling mill maintenance or spare-parts service providers. In 2025, global nominal capacity for High Ni-Cr ICDP rolls is estimated at approximately 62,000 tons, with shipments of about 49,380 tons and an average ex-factory price of around USD 1,650 per ton. Manufacturing gross margins are generally in the range of 20%–26%, influenced by alloy price fluctuations and quality-control requirements.
