High-performance AI Inference Servers are computing systems optimized for deploying trained artificial intelligence models in real-time or large-scale production environments. They integrate high-performance accelerators, CPUs, memory, high-speed networking, storage, power supplies, cooling modules, and system management software. Compared with general-purpose servers, they emphasize low latency, high throughput, energy efficiency, model concurrency, and stable operation under continuous workloads. They are widely used in generative AI services, recommendation systems, cloud inference, computer vision, speech recognition, edge cloud platforms, autonomous driving, and enterprise AI applications.

The industrial chain of High-performance AI Inference Servers covers upstream accelerators, CPUs, memory, storage devices, printed circuit boards, power modules, thermal components, high-speed connectors, optical modules, chassis, and

management chips. The midstream includes server design, board-level integration, firmware development, thermal design, assembly, testing, burn-in, and system optimization. Downstream applications mainly include cloud computing platforms, internet services, enterprise AI, data centers, autonomous driving, intelligent manufacturing, medical AI, financial technology, and edge computing. Related services include deployment, cluster tuning, model optimization, maintenance, remote monitoring, cooling upgrades, and lifecycle management.
