The global High-Performance NdFeB Permanent Magnet Materials market size is predicted to grow from US\$ 25380 million in 2025 to US\$ 45660 million in 2032; it is expected to grow at a CAGR of 8.9% from 2026 to 2032.

NdFeB Permanent Magnet Materials (NdFeB) is currently the most magnetic rare earth permanent magnet material, it has a high magnetic energy product (8MG0e-64MG0e), good coercivity and temperature resistance. High-Performance NdFeB Permanent Magnet Materials products are widely used in electric vehicles, wind power generation, inverter air conditioners, nuclear magnetic resonance, optical disk drives, instrumentation and other fields.

Permanent magnets are used in a variety of medical devices such as blood separators, surgical equipment, dental equipment, patient monitoring systems, drug delivery systems, and magnetic resonance imaging (MRI) scanners, among other essential and non-essential healthcare equipment. In the electronics industry, the product is used in air conditioner compressors and fans, tape recorders, computer cables, DVDs, cameras, watches, earbuds, speakers, microphones, mobile phones, voice coil motors, printers, fax stepper motors, printer rollers, hard disk drives (HDD) and portable electric tool motors, etc. The increase in the production volume of the above product categories is expected to directly support the growth of the permanent magnets market. There are about 100 permanent magnets in a typical car. While ferrites are favored by most automakers, a shift in consumer demand for light-duty vehicles is driving demand for small, high-performance magnetic products. Hence, advancements in vehicle energy efficiency are expected to positively support the growth of the segment over the forecast period.
