Polymers are broadly classified on their molecular arrangement as amorphous or crystalline. In an amorphous polymer, the molecules are arranged in a random fashion and in a crystalline polymer, the molecules are arranged in a specific order. On the basis of application, polymers are broadly categorized into commodity, engineering, high-performance, and ultra-polymers. Although high-performance polymers fall under the high-cost product, the functionalities and performance offered by them justify their cost.

The introduction of new governmental regulations, the rising focus of major players towards improvising the design and weight of vehicles, and the growing demand for fuel-efficient vehicles, result in an increased demand for lightweight vehicles. Technavio's research analysis on the global high-performance polymers market has identified the rising need for lightweight automobiles as one of the major factors that will have a positive impact on this market's growth. Automobile manufacturers in the US are focusing on achieving an average fleet fuel efficiency of around 36 miles per gallon by 2017 and more than 54 miles per gallon by 2025, as set by the corporate average fuel economy (CAFE). This in turn, offers growth opportunities for polymer manufacturers to develop advanced and innovative high-performance polymer automotive components.
