High Performance Rigid PCB refers to a type of printed circuit board (PCB) that is designed and manufactured to meet specific requirements for high-performance applications. It is a rigid board made of insulating material, typically fiberglass-reinforced epoxy laminate, with conductive copper traces and components mounted on its surface. The term 'high performance' typically implies that the PCB is designed to meet or exceed stringent performance criteria, such as high-speed signaling, high-frequency applications, high power handling, and advanced technology requirements. These PCBs are commonly used in industries such as telecommunications, aerospace, defense, industrial automation, medical devices, and automotive electronics. High-

performance rigid PCBs are designed with advanced materials, precise manufacturing techniques, and tight tolerances to ensure reliable signal integrity, minimal loss, high thermal management, and resistance to environmental factors. They may incorporate special features like controlled impedance, impedance matching, fine-line traces, high layer count, blind and buried vias, and specialized surface finishes.
