Laser Cleaner is a new generation of high-tech products for surface treatment. It is easy to install, operate, and automate. With simple operation, after giving powering supply and turning on the equipment, cleaning can be carried out without chemical reagent, medium, and water. The focus can be manually adjusted. Cleaning by fitting the curving surface, it makes high cleanliness and can remove the surface resin, paint, grease, stain, dirt, rust, coating, galvanization, and oxide layer. Besides, it is widely used in various industries, including ships, automobile repair, rubber molds, high-end machine tools, tracks, and environmental protection, etc.

High-power laser cleaning equipment is a cleaning equipment that uses high-energy-density laser beams to remove surface dirt, oxide layers, coatings, and other undesirable substances. Often referred to as laser cleaning or laser desmearing, this technique is widely used in industry and manufacturing. The working principle of high-power laser cleaning equipment is to use the high energy density of the laser beam to evaporate or peel off the dirt or coating on the surface. When the laser beam is irradiated on the pollutant or coating, it will generate high temperature and high pressure, which will cause the dirt or coating to evaporate, gasify or explode rapidly. Since the laser cleaning process is non-contact, it does not cause mechanical damage to the surface being cleaned.
