High-power photorelay is an electronic switching device that uses the photoelectric effect to control the connection and disconnection of high-power circuits. It usually consists of a photosensitive element (usually a phototransistor or optocoupler) and a power switch to drive the load. When light hits a photosensitive element, it causes the current or voltage inside it to change, triggering the power switch, causing it to turn the circuit on or off.

The global High-power Photorelay market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
