High Power S-band Fishing Radar is a radar system used for marine fishing and navigation, operating in the S-band (usually in the frequency range of 2 to 4 GHz). This radar system is capable of detecting and tracking long-range targets in complex marine environments, such as fishing boats, schools of fish, obstacles, and waves and storms in severe weather conditions. Due to the longer wavelength and stronger penetration of S-band radars, they are more effective than X-band radars in severe weather conditions, and are therefore widely used in ocean fishing, commercial shipping, and navigation.

The global High Power S-band Fishing Radar market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
