The high-power transient diode is a high-efficiency protection device in the form of a diode. When the two poles of the TVS diode are impacted by reverse transient high-energy, it can move between the two poles at a speed of 10 to the minus 12th power of a second. The high impedance becomes low impedance, absorbing up to several kilowatts of surge power, so that the voltage clamp between the two poles is at a predetermined value, which effectively protects the precision components in the electronic circuit from damage by various surge pulses.
