The report requires updating with new data and is sent in 48 hours after order is placed.

The fluxgate sensor uses a high magnetic permeability magnetic core. Under the saturation excitation of the alternating magnetic field of the excitation coil, the magnetic permeability of the magnetic core undergoes periodic saturation and non-saturation changes, causing the output of the detection coil wound on the magnetic core to communicate with the outside world. The voltage signal is proportional to the size of the magnetic field to measure the external magnetic field. The product has the advantages of small size, good linearity, wide frequency response, and low noise. It is widely used in magnetic vector measurement and total magnetic field measurement in weak magnetic field environments.

The global High Precision Fluxgate Sensor market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
