According to this study, the global High-Precision GNSS Positioning Services market size will reach US\$ 2942 million by 2031.

High-precision GNSS positioning service is a service that uses the Global Navigation Satellite System (GNSS) to provide users with centimeter-level or even millimeter-level high-precision location information through a series of technical means and processing methods. GNSS includes satellite navigation systems such as the United States' GPS, China's BeiDou (BDS), Russia's GLONASS, and Europe's Galileo. The service receives satellite signals, processes and calculates the signals, eliminates or weakens the influence of various error sources (such as satellite orbit errors, clock errors, ionospheric delays, tropospheric delays, etc.), and obtains high-precision positioning results.

United States market for High-Precision GNSS Positioning Services is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for High-Precision GNSS Positioning Services is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
