The global High-precision Thinning Machine Spindle market size is predicted to grow from US$ 54.55 million in 2025 to US$ 88.89 million in 2032; it is expected to grow at a CAGR of 7.4% from 2026 to 2032.

In 2024, global production of high-precision thinning machine spindles reached 2,430 units, with an average selling price of $21,428.57 per unit. A thinning machine (or grinder) is a device commonly used for ultra-high-precision grinding and thinning of semiconductor materials. Its primary function is to reduce the thickness of the material. The air-bearing spindle of the thinning machine, as its core component, plays a crucial role. The spindle of the air-bearing grinder consists of a water-cooled motor and air-bearing bearings. As the core component of the semiconductor grinder, the high-precision thinning machine spindle directly determines the performance and efficiency of the machine.
