The global High Pressure Braid-reinforced Tubing market size is predicted to grow from US\$ 1614 million in 2025 to US\$ 2408 million in 2032; it is expected to grow at a CAGR of 5.9% from 2026 to 2032.

In 2025, global High Pressure Braid-reinforced Tubing production reached approximately 515.63 million meters, with an average global market price of around US\$3.20 per meter.

The gross profit margin of major companies in the industry is between 22%-38%.

In 2025, the global production capacity of High Pressure Braid-reinforced Tubing was approximately 687.50 million meters.

High Pressure Braid-reinforced Tubing is a flexible tubing product reinforced with textile, steel wire, or synthetic fiber braids to withstand high internal pressure, abrasion, vibration, and fluid transmission stress. It is widely used for hydraulic systems, pneumatic equipment, fuel lines, industrial machinery, spraying systems, and high-pressure fluid transfer.

The industrial chain of High Pressure Braid-reinforced Tubing covers upstream materials such as rubber compounds, thermoplastic resins, steel wire, polyester fiber, aramid fiber, additives, adhesives, and extrusion equipment. The midstream consists of extrusion, braiding, curing, cooling, cutting, pressure testing, surface marking, and packaging. Downstream applications mainly include hydraulic machinery, automotive systems, construction equipment, agriculture machinery, industrial cleaning, fluid transfer equipment, and maintenance markets.

Hydraulic transmission, mechanical equipment and engineering fluid delivery scenarios boost the application of high pressure braid-reinforced tubing. With strong pressure resistance and tensile strength, it ensures safe and stable medium conveying. Anti-aging and corrosion-resistant formula greatly extend the service life in harsh working environments.
