A high pressure coolant pump (HPC) is a type of pump specifically designed for delivering coolant or cutting fluids at high pressures in manufacturing and machining processes. It is commonly used in metalworking applications such as CNC (Computer Numerical Control) machining, turning, milling, grinding, and drilling operations.

The main purpose of a high pressure coolant pump is to supply a high-pressure stream of coolant or cutting fluid to the cutting zone or tool interface. The high-pressure coolant significantly improves machining operations by enhancing cooling, lubrication, and chip evacuation. It helps to control temperature rise, reduce friction, prolong tool life, and improve product quality and machining efficiency.
