The global High Pressure Dry Powder Ball Press market size is predicted to grow from US$ 1222 million in 2025 to US$ 1537 million in 2032; it is expected to grow at a CAGR of 3.4% from 2026 to 2032.

High-pressure dry powder briquette machine is a high-end product in the briquette machine family. It can press various loose powders (such as metal ore powder, metallurgical waste, etc.) into spherical, egg-shaped or square blocks through forced pressurization and precision processing without adding water and adhesives. High-pressure dry powder briquette machine does not need to add water during the production process, which makes it particularly suitable for processing materials that are easy to deteriorate or difficult to dry when exposed to water. Due to the use of high-pressure forced pressurization technology, high-pressure dry powder briquette machine can press powders tightly together to form spherical products with high density and high strength. High-pressure dry powder briquette machine is widely used in industries such as metallurgy, chemical industry, coal and refractory materials. In the metallurgical industry, it is mainly used to process various waste and auxiliary materials, press them into blocks and then directly enter the furnace for smelting; in the chemical industry, it can be used to process various powdered raw materials to make spherical products with high density for subsequent processing and use; in the coal industry, it can also be used to press materials such as coal powder into blocks to improve combustion efficiency and environmental protection performance.

United States market for High Pressure Dry Powder Ball Press is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
