## Abstracts

The global High-pressure Grinding Rollers market size is predicted to grow from US\$ 728 million in 2025 to US\$ 896 million in 2031; it is expected to grow at a CAGR of 3.5% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

High pressure grinding roller is used for size reduction of ores, minerals and rocks. It compresses the feed material between two rotating rollers, one of which floats and other one remains in a fixed position. HPGR is mainly used in pellet feed to increase the specific surface area of the particles, to allow for strong pellets. This is in contrast to normal comminution applications, where size reduction is the main purpose. In pellet feed application, HPGR competes with dry ball mills, which consume more energy. HPGRs are commonly used in cement, ore and mineral processing industry.

China is the largest market, with a share about 25%, followed by North America and Europe, with the share about 23% and 20%. In terms of product application, the largest application is cement building materials, followed by metallurgy.
