High Pressure Processing (HPP) for rice and grains is a non-thermal food preservation technique that uses extremely high pressure, typically between 100 and 600 MPa, to inactivate pathogens and spoilage microorganisms. This process helps maintain the quality, texture, and nutritional value of the rice and grains without the need for heat, thereby extending their shelf life while preserving their natural characteristics. HPP is particularly valued in the food industry for its ability to ensure food safety and maintain the sensory and nutritional qualities of products.
