The global High Pressure Scroll Compressor market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

A vortex compressor is a type of volumetric compression compressor, with compression components consisting of a moving vortex plate and a stationary vortex. Its working principle is to use the relative revolution motion of the dynamic and static vortex plates to form a continuous change in the closed volume, achieving the purpose of compressing gas. Because refrigerant gas flows through the motor, this ensures that the motor can be completely cooled in all applications. The oil separates and drips back into the oil pool. After leaving the motor, the gas enters the vortex plate for compression, and finally the compressed exhaust leaves the compressor through the exhaust port.
