A high-pressure water mist system in archives is a specialized fire suppression solution designed to protect valuable documents, records, and artifacts. This system releases fine water droplets at high pressure, rapidly cooling the fire and reducing oxygen levels to suppress flames, while minimizing water exposure that could otherwise damage sensitive materials. Due to the small droplet size, these systems are ideal for archives, as they can extinguish fires efficiently without causing extensive water damage. The system is also environmentally friendly, reducing the risk of both fire and water-related damage in a controlled manner.
