## Abstracts

The global High Profile Gastrostomy Tube market size is predicted to grow from US\$ 262 million in 2025 to US\$ 379 million in 2032; it is expected to grow at a CAGR of 5.5% from 2026 to 2032.

A High Profile Gastrostomy Tube (HPGT) is a feeding tube that is inserted into the stomach through the abdominal wall, but it has a larger external component compared to low-profile tubes. The higher profile design means the tube extends more prominently above the skin, which can make it easier to grip and manage during feeding and maintenance. HPGTs are typically used for individuals who require long-term enteral nutrition and need a durable, easy-to-access feeding solution. They are also often used when medical staff need to easily check or adjust the tube placement.

Fresenius Kabi, Cardinal Health and Nestle are the top 3 companies in global gastrostomy feeding tube (G-tube) market and account for about 40% of total market share. Geographically speaking, Americas holds about 35% of global market share, followed by APAC with about 30% share. In terms of type, low profile G-tube segment holds an important share of over 50%. In terms of application, over 60% of the gastrostomy feeding tube (G-tube) are for adult.
