In order to solve the economic, social and environmental problems related to batteries, the European Union officially implemented the "New Battery Law" on January 1, 2022, which puts forward clear requirements for the sustainability, safety and carbon footprint of batteries. Lithium battery consumption in Western Europe is mainly concentrated in Germany, Britain, France and other countries, with an average annual growth rate of 3%-5%. In 2020, European countries will launch new energy subsidies, and sales will increase by 300% within two years from 2020 to 2021. The United States officially implemented the "Inflation Reduction Act" on January 1, 2023. The bill focuses on supporting industries such as electric vehicles and energy storage. For the first time, the bill includes independent energy storage in the scope of subsidies. In 2021, the United States Advanced Battery Alliance (FCAB) released the "National Lithium Battery Blueprint 2021-2030", pointing out that the United States should focus on the research and development and application of lithium batteries. China's policy on lithium batteries is mainly focused on lithium-ion batteries. In 2015, in order to strengthen the management of the lithium-ion battery industry and improve the level of industry development, China formulated the "Regulations for the Lithium-ion Battery Industry".
