Antimony is known as a metalloid, a unique element with both metal and non-metal characteristics. It is a good material for semiconductor components yet fire retardant even though it is exposed with an open flame. Covering substances with antimony sputtering targets will make a perfect component that has high conductivity that will not burn due to fire exposure. Antimony has very well fire retardance

property and so antimony sputtering targets can be used for fire retardant coatings. Also for optoelectronic devices like LEDs, laser diodes,

photodiodes and solar cells antimony sputtering targets can be used.
