The global High-purity Atomized Steel Powder market size is predicted to grow from US\$ 329 million in 2025 to US\$ 403 million in 2032; it is expected to grow at a CAGR of 3.0% from 2026 to 2032.

High-purity atomized steel powder is a specialized form of steel powder characterized by its exceptional purity and fine particle size. It is produced through a process called atomization, where molten steel is rapidly cooled and solidified into tiny, spherical particles. This type of steel powder is known for its high degree of chemical purity, minimal impurities, and controlled particle size distribution. It is often used in advanced manufacturing processes, such as additive manufacturing (3D printing) and powder metallurgy, where precise material properties and performance are crucial.

High-purity atomized steel powder is increasingly used in additive manufacturing processes, such as powder bed fusion (PBF) and binder jetting. The adoption of 3D printing technology in industries like aerospace, automotive, and healthcare is driving the demand for high-quality metal powders to produce complex and customized parts.
