The global High Purity Basic Copper Carbonate market size is predicted to grow from US\$ 105 million in 2025 to US\$ 146 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

High purity basic copper carbonate is an inorganic copper salt material mainly composed of $Cu(OH)CO_3$. It is prepared through high-purity raw materials and precision processes, and the impurity content of iron, lead, nickel, etc. is controlled at the ppm level. It has the characteristics of high purity, uniform particle size, good dispersion, and strong chemical stability. It is widely used in fields such as electronic electroplating, fine chemical catalysts, functional materials, and high-end pigments. It is an important subdivision product for the development of alkaline copper carbonate towards high added value. In 2025, global High Purity Basic Copper Carbonate production reached approximately 14.69 K MT, with an average global market price of around US\$ 7,287 per MT.

The high-purity basic copper carbonate market as a whole belongs to the segmented material field driven by 'small volume stable growth technology'. Currently, the industry is upgrading from traditional agricultural and pigment applications to electronic materials and high-end manufacturing. On the one hand, it is driven by the demand for semiconductors, electroplating, and precision electronic manufacturing, and the proportion of high-purity and ultra high purity products continues to increase. On the other hand, the expansion of new energy and new material applications brings new demand space. At the same time, the industry presents obvious technological stratification, and high-end products require higher purity control and particle size regulation. Enterprises with process and quality stability have stronger competitiveness. Coupled with the trend of domestic substitution, the penetration rate of Chinese

manufacturers in the mid to high end market continues to increase. In the future, market growth will be mainly driven by electronic and functional material level products, while the proportion of traditional low-end applications will be higher. It will gradually decrease.
