Chrysene is a polycyclic aromatic hydrocarbon with the chemical formula $C_{18}H_{12}$, consisting of four fused benzene rings. It is a natural component of coal tar and was first isolated and characterized from coal tar. It is also found in creosote at levels of 0.5–6 mg/kg. The English word 'chrysene' originates from the Greek $\chiρϑϑοϑ$ (chrysos), meaning 'gold', due to the golden yellow color of its crystals, which is considered to be the correct color and characteristic of the compound when isolated. However, high-purity chlorine is colorless, and the yellow color is due to its trace orange-yellow isomer tetracene, which is not easy to separate.
