The global High Purity Holmium Oxide market size is predicted to grow from US$ 54.78 million in 2025 to US$ 76.49 million in 2032; it is expected to grow at a CAGR of 5.0% from 2026 to 2032.

High-purity holmium oxide (Ho?O?) is an important rare earth metal oxide, mainly used in lasers, nuclear reactors, catalysts and some high-tech electronic equipment. Its performance characteristics make it highly valuable in certain areas such as laser materials and magnetic materials. In laser technology, high-purity holmium oxide is mainly used to make holmium lasers, especially mid-infrared lasers. Omelligent lasers can be used in medical fields (such as laser surgery, treatment) and industrial fields (such as material processing, laser detection, etc.). In 2024, global High Purity Holmium Oxide production reached approximately 734 Tons, with an average global market price of around US$ 73 per kg.

With the continuous progress and development of science and technology, the demand for high-purity samarium oxide is also increasing year by year. Especially in new energy and electronic technology, it has shown great potential. For example, in battery technology, researchers are trying to apply it to new energy storage devices, hoping to bring higher energy density and longer service life.
