The global High Purity Lithium Sulfide market size is predicted to grow from US\$ 22.1 million in 2025 to US\$ 1047 million in 2031; it is expected to grow at a CAGR of 90.3% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Lithium sulfide is the inorganic compound with the formula Li_2S . It crystallizes in the antifluorite motif, described as the salt $(\text{Li}^+)_2\text{S}^{2-}$. It forms a solid yellow-white deliquescent powder. In air, it easily hydrolyses to release hydrogen sulfide (rotten egg odor). Lithium sulfide (Li_2S) is a product specially designed for the use in high performance batteries which can be either applied as electrode material or as precursor for solid electrolytes. At present, many applications of lithium sulfide in lithium batteries are still in the stage of R & D and testing.

Solid-state batteries are an innovative battery technology that uses solid electrodes and solid electrolytes. Solid-state batteries are seen as batteries that can inherit the status of lithium-ion batteries. They are expected to replace traditional liquid lithium-ion batteries and greatly improve battery energy density. With the increase in investment in solid-state batteries, the demand for solid electrolytes including lithium sulfide will also increase.
