High Purity Magnesium Hydroxide Retardant refers to a flame retardant material composed primarily of magnesium hydroxide ($Mg(OH)_2$) with high chemical purity. It functions by releasing water vapor upon thermal decomposition, thereby absorbing heat, diluting combustible gases, and forming a protective barrier of magnesium oxide (MgO) on the material surface, which effectively inhibits flame propagation. Compared to conventional halogen-based retardants, high purity magnesium hydroxide offers advantages such as low smoke emission, non-toxicity, environmental friendliness, and stable thermal performance. It is widely used in polymers, cables, electronics, building materials, and other fields requiring high fire safety standards.
