High purity phosphoric acid is a type of phosphoric acid that has been refined and purified to remove impurities, contaminants, and other substances, resulting in a product with a high level of purity. Phosphoric acid (H_3PO_4) is a mineral acid commonly used in various industries for a range of applications.

Phosphoric acid can be produced from phosphate rock through a chemical process that involves treating the rock with sulfuric acid. The resulting phosphoric acid can vary in purity depending on the source and production methods. High purity phosphoric acid is typically produced through additional purification steps, such as distillation, filtration, and ion exchange, to ensure that it meets specific purity requirements for particular applications.
