High Purity Phytosterols are plant-derived sterol compounds refined to high concentrations, commonly used for cholesterol-lowering functional foods and nutraceutical supplements. They are typically sourced from vegetable oil distillates, tall oil, or other plant lipid streams, then purified through extraction, crystallization, and distillation. High purity grades enable consistent efficacy, better sensory properties, and compliance with food and pharmaceutical specifications. Phytosterols are incorporated into fortified foods, softgel capsules, tablets, and specialty ingredients for heart health products.

The industrial chain starts with upstream plant oil processing by-products as sterol-rich feedstocks, plus solvents, catalysts, and filtration media. Midstream processing includes saponification, extraction, distillation, crystallization, drying, and polishing filtration. Downstream applications include functional food manufacturers, dietary supplement brands, pharmaceutical ingredient users, and contract manufacturing. Supporting

services include purity testing, contaminant control, traceability documentation, and regulatory registration support.
