High Purity Pig Iron (HPPI) is a type of pig iron that has a very low level of impurities, such as manganese, phosphorus, and sulfur. HPPI is manufactured from the smelting of ilmenite sand in electric furnaces to produce titanium dioxide slag and pig iron. HPPI is mainly used in the production of ductile iron castings, which are also known as nodular or spheroidal graphite iron castings. Ductile iron castings have high strength, elasticity, and resistance to corrosion and wear.

The industry trend of HPPI is expected to grow in the coming years due to the increasing demand for ductile iron castings in various sectors, such as automotive, engineering, and energy. Ductile iron castings offer superior mechanical properties and cost-effectiveness compared to other types of cast iron or steel.
