The global High Purity Thulium Oxide market size is predicted to grow from US$ 24.2 million in 2025 to US$ 33.34 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

High-purity thulium oxide is an important rare earth metal oxide with a chemical formula of Tm?O?. Its appearance is often a light green or white fine powder, which shows an amazing blue fluorescence under the irradiation of ultraviolet light. Innovation in the field of medical imaging is inseparable from the contribution of thulium oxide. The thulium-doped scintillator material can effectively enhance the contrast of X-ray imaging, allowing doctors to see the details inside the human body more clearly. This technology especially shows great potential in early diagnosis of tumors, detecting diseases in advance and gaining valuable treatment time for patients. In the fields of finance and security, the fluorescence characteristics of thulium oxide are widely used in anti-counterfeiting of banknotes, encryption of important documents, etc. Because its fluorescent markers are extremely difficult to imitate, thulium oxide has become an important "invisible guardian" to ensure financial security and information confidentiality. In 2024, global High Purity Thulium Oxide production reached approximately 179 Tons, with an average global market price of around US$ 132 per kg.

United States market for High Purity Thulium Oxide is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
