The global High Purity Water System Service market size is predicted to grow from US\$ 514 million in 2025 to US\$ 850 million in 2032; it is expected to grow at a CAGR of 7.4% from 2026 to 2032.

High-purity water system services are comprehensive technical services provided around high-purity process water, ultrapure water, deionized water, pharmaceutical purified water, water for injection, pure steam, and high-grade laboratory pure water systems. Core services include system design, process route configuration, equipment and skid-mounted module manufacturing, installation and commissioning, automation control, validation, operation and maintenance, consumable replacement, resin regeneration, membrane cleaning, online monitoring, and lifecycle management. These systems typically consist of pretreatment, reverse osmosis, EDI, ion exchange, mixed-bed polishing, UV oxidation, UV sterilization, ultrafiltration, degassing, ozone or hot water disinfection, terminal filtration, storage and distribution loops, and spot polishing. They are used to stably control key indicators such as resistivity, TOC, particulate matter, microorganisms, endotoxins, metal ions, silicon, boron, and dissolved gases, primarily serving semiconductor wafer manufacturing, display panels, electronic materials, pharmaceuticals and biotechnology, laboratory analysis, medical, and other precision manufacturing scenarios.

From a technological perspective, industry competition is shifting from simply achieving water quality standards to focusing on lifecycle stability, water conservation and reuse, low TOC control, online monitoring, data-driven operation and maintenance, and rapid verification and delivery capabilities. Semiconductor customers are more focused on resistivity at the 18.2 M Ω cm level, control of ion and metal impurities at the ppt level, extremely low levels of indicators such as particulate matter, boron, silicon, and TOC,

and long-term stable system operation; pharmaceutical customers are more concerned with GMP compliance, hot water disinfection, ozone disinfection, membrane-based WFI, storage and distribution loops, and validation documentation systems; laboratory customers emphasize water quality stability, ease of maintenance, consumable replacement, and brand service networks. In the future, companies with core process packages, project management, automation control, validation documentation, operation and maintenance services, and local response capabilities will continue to increase their market share; pure equipment assemblers and distributors will remain primarily in the long-tail market.
