Water reducers are special chemical products added to a concrete mixture before it is poured. High range water reducing admixture reduces the quantity of mixing water required to produce concrete of a given consistency by 12 % or greater. It is capable of producing great water reduction, great flowability, or both. High range water reducing admixture can reduce the water-cement ratio while maintaining slump, increase slump while maintaining a constant water-cement ratio, or reduce the cementitious materials content and water content while maintaining constant slump and strength.

The global High Range Water Reducer market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
