Water reducers are special chemical products added to a concrete mixture before it is poured. High range water reducing admixture reduces the quantity of mixing water required to produce concrete of a given consistency by 12 % or greater. It is capable of producing great water reduction, great flowability, or both. High range water reducing admixture can reduce the water-cement ratio while maintaining slump, increase slump while maintaining a constant water-cement ratio, or reduce the cementitious materials content and water content while maintaining constant slump and strength.
